KVARTA

TV Stream Monitor
Quick Start

1. Unpacking

Check that all these accessories are present:

  1 power supply cable
  2 straight ethernet cable
 1 quick start notice

2. Connecting to the embedded Web site

1. Connect the Ethernet cable between the RJ45 and the network.
2. The default IP address for **MANAGEMENT** port is **192.168.2.3**
3. The default IP address for **STREAM** port is **192.168.3.3**

NOTE: *Your computer should be in the same network.*

4. Open a Web browser (Internet Explorer, Mozilla…) and enter the device IP address. Login with the default username and password - (**admin/admin**). The home page of the embedded web site is displayed.

3. Adding new IP streams

- On the embedded web site home page, click "**Monitoring > +Add New**":
- Enter the new streams URL
- Enter a relevant name for the new stream
- Click the "**Add**" button, and the new stream will be monitored

- Selecting a stream from this page will send you to the **"Details"** tab for that specific stream

KVARTA

4. Look at current IP Stream status for parameter details

- On the embedded web site go to "**Details**". Select which stream you would like to view
- Various info for the selected stream can be viewed like – MPEG tables, PID Statistics, Sections, etc.

5. Configuring the Alarms

- From the embedded web site home page, go to "**Alarms**":
- Remember to "**Save**" any changes you've made to the alarms before proceeding to the next set of alarms
- Configure the Stream alarms
- Configure the Service alarms
- Configure the TR 101 290 alarms (**if applicable**)

Please check the user manual for more information on how to communicate with your device and how to configure it.
